

Business Section

The business that hired me for this job was the State of Connecticut Department of Transportation. Connecticut has a need for an overhaul of the transportation system in the state. However, funding is an issue. The state government hopes to be able to fund this endeavor by placing tolls on the roads. Connecticut is a drive through state meaning that most people from out of state do not need to stop to get gas in Connecticut as one tank of fuel is often more than enough to make it from New York to the Massachusetts line. As a result, Connecticut is missing out on tax dollars from out of state drivers. Whereas neighboring state are capitalizing on out of state traffic to help fund their road maintenance. Forty percent of traffic on the state's major highways is out of state traffic and to remain competitive with New York and Massachusetts; Connecticut needs to reinstate tolling.

The state needs a list of roads that should be tolled by applying ADT (Average Daily Traffic) data. What roads in Connecticut are the most travelled, and what locations, such as which towns are those roads most used in. This will help determine the best locations to place tolling gantries to maximize income for the state. Also, this could be used to see which roads are used the most and therefore need the most attention as far as repairs and other maintenance are concerned.

```
-- Query 1
-- List ADT, order by RouteNum and ADT
SELECT t.TaxCode,
       t.TownName,
       hys.RouteNum,
       CAST(adtt.NumCars AS INT) AS ADT
FROM Towns t
INNER JOIN AnnualAverageDailyTrafficInterStates adtt
  ON t.TaxCode = adtt.TaxCode
INNER JOIN InterStates hys
  ON hys.RouteNum = adtt.RouteNum
Order BY RouteNum, ADT DESC
-- End of InterStates ADT and RouteNum order by
```

Figure 1. Query 1, produces the results in Table 1

Report 1: ADT ordered by Route Number and Average Daily Traffic ordered in descending order, this way we can see which towns and roads have the most traffic. This would show the most used area of the road because the roads are organized by Town name, and the average daily traffic. This allows us to see areas of a high travel. This gives us the best areas to place tolls.

Table 1. Average ADT, ordered by RouteNum and ADT in descending order

TaxCode	TownName	RouteNum	ADT
132	South Windsor	I-291	48817

102	North Stonington	I-95	34840

The next query we order ADT and the Route Numbers by State routes. This starts with the very first road in the line. Therefore, all roads are in order starting with 1 and so on. The busiest town on each road is displayed first.

```
--Query 2
-- ADT and RouteNum order by State Routes
SELECT t.TaxCode,
       t.TownName,
       hys.RouteNum,
       adt.NumCars
FROM Towns t
INNER JOIN AverageDailyTraffic adt
  ON t.TaxCode = adt.TaxCode
INNER JOIN stateRds hys
  ON hys.RouteNum = adt.RouteNum
Order BY hys.RouteNum, NumCars DESC
--END of ADT and RouteNum order by State Routes
```

Figure 2. Orders ADT by Route, see Table 2

Table 2. Average Daily Traffic ordered by State Routes in every town in CT

A third query would be to list every Tax Code with its town. In a lot of data from the state the route number and ADT are listed next to only the town's tax code. Which without a list of the towns and their perspective tax codes, it would not be possible which town has which tax code.

```
--Query 3
--List Town Names and their Tax Codes
SELECT t.TaxCode,
       t.TownName
From Towns t

Group BY t.TaxCode, t.TownName
Order by t.Taxcode ASC
```

Figure 3. Displays the town its perspective tax code. See Table 3.

Table 3 Taxcodes of CT with perspective Town.

169	Woodstock

Next, we should also list the towns by population. Towns with higher population will require more maintenance to roads and which towns may require more aid to reduce congestion.

```
--Query 4
--List towns in according to their populations
SELECT t.TaxCode,
       t.TownName,
       CAST(t.[Population] AS INT) AS POP
FROM Towns t
GROUP BY t.TaxCode, t.TownName, t.[Population]
ORDER BY POP DESC

-- List the Town Names and their tax codes
```

Figure 4 List all Towns in order of their population, see table 4 for results

Table 4 List of towns in order by population in descending order.

TaxCode	TownName	POP
015	Bridgeport	144229

Another valuable tool would be to see the ADT of all state routes. Some have argued that tolling state routes would be necessary to determine whether tolling the roads would be appropriate. The biggest challenge was in trying to find enough data for all these roads. Below is not an exhaustive list, it includes the most travelled.

```
--Query 5
-- GET the ADT of CT state routes

SELECT t.TaxCode,
       t.TownName,
       hys.RouteNum,
       CAST(adtt.NumCars AS INT) AS ADT
FROM Towns t
INNER JOIN AverageDailyTraffic adtt
  ON t.TaxCode = adtt.TaxCode
INNER JOIN stateRds hys
  ON hys.RouteNum = adtt.RouteNum

GROUP BY t.TaxCode, t.TownName, hys.RouteNum, adtt.NumCars
ORDER BY ADT DESC

|-- Get the ADT of CT state routes
```

Figure 5 ADT of CT state routes Ordered in descending order by ADT

Table 5 Results from Figure 5, ADT of CT routes, ordered by ADT

TaxCode	TownName	RouteNum	ADT

Moreover, it is important to know the high-volume areas of interstates in Connecticut to determine where funds should be diverted to for maintenance and upgrades. By placing tolls in these areas would give the greatest financial benefit to the state, rather than placing tolls in every single town along the highway. This avoids wasted money on maintenance of the toll gantries and extra police enforcement in

areas with lower traffic. To better use state funds, enforcement and public funds can be diverted to high volume areas which will give the greatest benefit to all that need to use the highway.

```
--Query 7
--Subquery to get high volume areas from interstates

)SELECT t.TaxCode,
        t.TownName,
        hys.RouteNum,
        CAST(adtt.NumCars as INT) AS ADT
From Towns t
INNER JOIN AnnualAverageDailyTrafficInterStates adtt
    ON t.TaxCode = adtt.TaxCode
INNER JOIN InterStates hys
    ON hys.RouteNum = adtt.RouteNum
WHERE adtt.NumCars > 100000
GROUP BY t.TownName, t.TaxCode, hys.RouteNum, adtt.NumCars
ORDER BY ADT DESC
```

Figure 7. Query 7, displays ADT from on high volume areas along the highway and orders it in descending order by ADT

Table 7. Results of Query 7, ADT from interstates from towns that see at least ADT of 10000, see Figure 15 below.

TaxCode	TownName	RouteNum	ADT
015	Bridgeport	I-95	142991
103	Norwalk	I-95	138645

ADT (Average Daily Traffic of Interstates with at 10,000 cars per day. Towns that see traffic also displayed.

Figure 15. The most used highways in Connecticut, with each town showing the amount of traffic it sees each day on average for the year of 2011.

The next two queries also help to determine where funds should be placed. Query 8 will only display ADT on high volume roads and which towns that this occurs in. This will help regulators in Hartford decide which state routes should receive the most funding for repair and possible locations to install tolls.

Query 9 is a rerun of Query 7 but with the addition of adding town populations. This helps because it can help regulators determine if the traffic on the highway is related to local traffic or out of state traffic.

```
--Query 8
-- Subquery to get high volume areas from state routes,

SELECT t.TownName,
       hys.RouteNum,
       CAST(adtt.NumCars as INT) AS ADT,
       CAST(t.[Population] AS INT) AS POP
FROM Towns t
INNER JOIN AverageDailyTraffic adtt
ON t.TaxCode = adtt.TaxCode
INNER JOIN stateRds hys
ON hys.RouteNum = adtt.RouteNum
WHERE adtt.NumCars > 10000
GROUP BY t.TownName, hys.RouteNum, adtt.NumCars, t.[Population]
ORDER BY ADT DESC, POP DESC
```

Average Daily Traffic of I-95, I-91, I-84

Figure 16. Average Daily traffic with the populations of each Connecticut town that the major highways run through.

Query 10 shows which towns highways run through. In addition to possible locations for tolls, these would be the areas that will need the greatest expenditure of public funds to maintain roads as they will see the majority of out of state traffic. If tolls are given a green light, these would be the first towns to look at for placing the gantries.

```

Query 12 displays the average usage of all Connecticut interstates by taking the ADT of each interstate in each town and averaging them all together. Then the interstates are ordered by ADT in descending order. This will show which interstates are most used and therefore which ones would generate the most revenue if tolls were reintroduced.

```

-- Query 12
)SELECT
  rts.RouteNum,
  AVG(CAST(adtt.NumCars AS INT)) AS AADT
FROM AnnualAverageDailyTrafficInterStates adtt,
Highways hys
INNER JOIN RoutesandTowns rts
  ON rts.RouteNum = hys.RouteNum
WHERE adtt.RouteNum = hys.RouteNum

GROUP BY rts.RouteNum
ORDER BY AADT DESC
) -- Use of average to show average usage of interstates in CT

```

Figure 12. Displays the Average ADT of each interstate in CT

Table 12. The results from query 12. Displaying the average ADT of each interstate in CT

RouteNum	AADT
I-91	107995
I-95	98798
I-84	78470
I-684	70200
I-691	48305
I-384	35429
I-291	34289
I-395	33059

Average Daily Traffic of all Interstates in Connecticut

Figure 18. Average of Average Daily Traffic of all interstates in CT.

Lastly. Query 13 displays the average ADT of each of routes 2, 15, and 8 in Connecticut which along with route 9 are proposed routes for being tolled.

(https://www.ct.gov/dot/lib/dot/documents/dcommunications/press_release/ctdot_tolling_report_11142018.pdf , pg6) Route 9 is not present because I could not find any data on this road. This shows the most used roads in CT and therefore the most profitable roads if tolls were reintroduced. Route 15, which for a portion of it, the Merritt Parkway does not allow commercial traffic but is very busy due to its proximity to New York City. This would be the best place to toll according to the average amount of cars that Route 15 accommodates each day.

```
-- Query 13
SELECT
  rts.RouteNum,
  AVG(CAST(adtl.NumCars AS INT)) AS AADT
FROM AverageDailyTraffic adtl,
Highways hys
INNER JOIN RoutesandTowns rts
  ON rts.RouteNum = hys.RouteNum
WHERE adtl.RouteNum = hys.RouteNum and hys.RouteNum = 'Route 2'
  or adtl.RouteNum = hys.RouteNum and hys.RouteNum = 'Route 15'
  or adtl.RouteNum = hys.RouteNum and hys.RouteNum = 'Route 8'

GROUP BY rts.RouteNum
ORDER BY AADT DESC

-- Use of average ADT of state routes in CT
```

Figure 13. Displays the average ADT of CT routes 2, 15, and 8 in descending ordered by Average Daily Traffic

Table 14. CT state routes 2,15, and 8 in database ordered by average ADT, with route 15 showing as the busiest on average.

RouteNum	AADT
Route 15	13550
Route 2	11800
Route 8	4750

Average Daily Traffic of CT Routes 15, 8, and 2

Figure 14. Visual representation of Table 14. Showing Route 15 as the most used candidate road for tolling out of the proposed three roads that data has been collected on.

In conclusion with these reports, I believe regulators would be best positioned to make an informed decision of where tolls could be placed. The data gathered illustrates the best locations for toll placements to help maintain the roads and ease congestion, while also endeavoring to show problem areas that need improvement.
